

Cottesmore St Mary
Eco Committee
Friday 3rd April 2020

Bees are vitally important to the health of our planet, yet the way we are living - including the impact of climate change - is leading to their demise and in the case of some bee species their threatened extinction. Bees, and their role in pollination, represent a huge natural capital that has to date been taken for granted, we need to listen to this wake-up call.

This week's Young Climate Warriors challenge focuses on bees – encouraging children to keep their eyes peeled for them when they are outside, learning how to draw them, thinking of ways of helping them from their garden, or outside space, and watching a video about their extraordinary 'waggle dance'.

The Young Climate Warriors challenges aim to provide fun activities that children can engage with whilst schools are closed. If your pupils would like to receive the challenges directly by email, they can sign up using this link: <https://www.youngclimatewarriors.org/youngclimatewarriorssubscribe>

This week's challenge
3rd April

Remember to Hit the RED BUTTON - CHALLENGE COMPLETED!

Spring has arrived!
Blossom is bursting, birds are singing green leaves unfurling, have you seen any bees yet? When you are next outside can you 'bumble' around looking for insects and bugs – and possibly a bee? When back at home – you could learn how to draw a bee? Bees are struggling with climate change and fewer wild spaces – can you plant some bee-friendly plants?
