'The scientific evidence is clear: the climate is changing and will continue to change, affecting societies mainly through water'

World Water Development Report, March 2020

This week's challenge asks Young Climate Warriors to change their habits to help save water – having 5-minute showers, turning the tap off whilst brushing their teeth or stopping a dripping tap. This challenge also encourages children to think about the water issues experienced by others around the world, these are being greatly exacerbated by climate change.

We provide a link to the UN Sustainable Development Goals which commit to ending world poverty – Goal number 6 relates to 'clean water and sanitation' -

<https://sustainabledevelopment.un.org/sdgs>. This WaterAid video explains the importance of striving to combat climate change to help alleviate water issues - <https://youtu.be/OOClzoeZ1gU>

This week's challenge
24th April

Remember to Hit the RED BUTTON - CHALLENGE COMPLETED!

Can you remember the devastation caused by Storm Dennis – it was only 2 months ago!
Climate change is making droughts and floods worse.
Can you save water this week?
Switch off your tap whilst brushing your teeth?
Turn off the dripping tap? 5-minute shower limit?
Go the wateraid.org and learn about water issues around the world.
